Department of Geology
Tour Report -2017

Department of geology has conducted field trip for B. Sc. Ist year on 25/07/2017 to Naranag, Manasbal and Safapora areas under the supervision of Prof. Imtiyaz A. Parray (HOD Geology). The aim of visit was to expose the students to practical aspects of geology. The students were given exposure about different lithologies and structures. The rocks that were seen are limestone, andesites and phyllite. The different structures that were present in different formations are faults, folds, columnar joints, reverse faults. Students visited Kondabal-Mansbal village where lime is extracted from source rock Limestone, mechanism and methodology of the extraction process were discussed with local experts which made vibrant discussion and students acquire knowledge about the concept of mechanism. Students were also informed about different geomorphological features that were formed due to river erosion and deposition like George, Alluvial fan, etc. At the end students remained satisfactory with their field trip as it was their practical exposure to geological knowledge.
