

TOUR REPORT

On 15-07-2019, a field trip of UG 4th and 5th semester students of Sericulture was organized. The place of visit for the said trip was Basic Seed Station, Tarhama where Commercial silkworm seed is produced. The students and the staff reached the said Seed station at about 11:00 am. The staff of the seed station welcomed the students.

At the outset, a detailed introduction regarding the various activities viz, Silkworm rearing, breeding and seed production was put forward. The whole process pertaining to Sericulture from brushing of silkworm larvae upto Cocoon production was explained in detail which undoubtedly helped the students to get fully acquainted with the various activities being performed at the field level.

The different breeding techniques were also taught by the officials of the Station especially the methods and techniques followed for production of double hybrid seed for increased productivity. The students then learned about the different types of egg preparation (Loose egg preparation and Sheet egg preparation). At about 5:00 pm, the field trip concluded and the students and staff proceeded back towards the College.
