Mathematical Typesetting with Microsoft Word

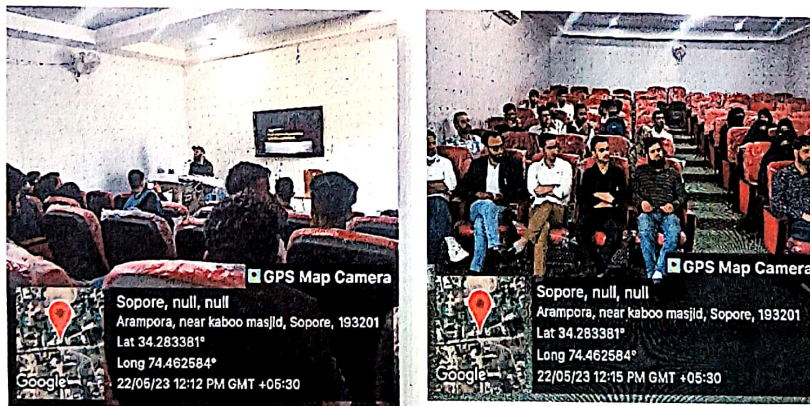

Report

From writing on leaves to writing on paper, man has progressed by leaps and bounds. Now, we are typing on digital screens. This has been an unbelievable journey of great achievements.

Despite these achievements, many of us are still not able to type/incorporate mathematical symbols, equations, and objects in their word processing software, such as MS Word.

With the above in view, the department of mathematics and statistics organized a one-day workshop on Mathematical Typesetting with Microsoft Word on May 22, 2023.

Kulsooma Habib, a second semester statistics student shouldered the responsibilities

of anchoring, announcing and, later, presenting the vote of thanks.

Maryam Ramzan, another second semester statistics student briefly traced the evolution of writing from that on leaves to digital screens.

May 22, 2023

A technical session on the main theme was handled by Mr. Firdous Ahmad Mala, head, dept. of mathematics. The technical session included the basics of opening MS docs transcending thereafter to typing mathematical symbols, equations, and other objects, such as matrices and limits in MS Word.

A good number of faculty and an equally good number of students participated in the workshop.
